Day-2: Python Assignment

1. Working with Lists

```
sales = [25000, 32000, 56000, 67000, 12000]
```

- 1.1. Find the total sales.
- 1.2. Find the highest sales figure.
- 1.3. Find the lowest sales figure.
- 1.4. Sort the sales figures in ascending order.
- 1.5. Sort the sales figures in descending order.

2. Working with Tuples

```
data = (10, 20, 30, 20, 40)
```

- 2.1. Count how many times 20 appears in the tuple. (Write in one line)
- 2.2. Find the index position of 30. (Write in one line)
- 2.3. Count how many times 10 appears in the tuple. (Write in one line)
- 2.4. Find the index of value 40. (Write in one line)
- 2.5. What error occurs if you try to change data[0]? (Write in one line)

3. Working with Sets

```
menu_A = {"Pizza", "Burger", "Pasta", "Sandwich", "Coffee"}
```

```
menu_B = {"Burger", "Momos", "Pasta", "Tea", "Ice Cream"}
```

- 3.1. Create a set that shows all food items available in both restaurants.
- 3.2. Find the common food items in both menus.

- 3.3. Find food items that are only in Restaurant A.
- 3.4. Find food items that are only in Restaurant B.
- 3.5. If a new combined café opens, which items should be on the final menu?

4. Working with Dictionaries (API Exercise)

```
latitude = 28.61
```

```
longitude = 77.20
```

```
url = f"https://api.open-meteo.com/v1/forecast?latitude={latitude}&longitude={longitude}&current_weather=true"
```

- 4.1. Print the temperature (°C) from the weather data. (Write in one line)
- 4.2. Print the wind speed value from the API response. (Write in one line)
- 4.3. Print the observation time field. (Write in one line)
- 4.4. Convert the temperature to Fahrenheit and print it ($^{\circ}\text{F} = ^{\circ}\text{C} \times 9/5 + 32$). (Write in one line)
- 4.5. Print all keys under 'current_weather' to see what data is available. (Write in one line)

--- End of Assignment ---

Complete all exercises and submit your solutions.
